Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-6 have been examined. Application 09/910,785 has a filing date 07/24/2001 and priority data 07/24/2001.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Messer (U.S. 5,991,740).

As per claim 1, Messer teaches:

An internet advertising system comprising an advertiser's web server having service or good information, an advertising web server having advertising information of said advertiser's web server, a plurality of user terminals, and a network for connecting said advertiser's web server, said advertising web server and said user terminals together (see column 2, lines 21-42; column 4, lines 44-59; column 8, lines 52-67; column 9, lines 15-25). Messer does not expressly teach said advertiser's web server allows an access request from each of said user terminals only if said access request passes through said advertising web server. However, it would have been obvious to a person of ordinary skill in the art at the time the application was made, to know that a Content provider would be more than willing to bind a contract with a Merchant to place a Merchant's ad banner into the Content provider website, if the contract indicates that

Art Unit: 3622

the Merchant would reject a direct access request from each user terminals to the Merchant's website. This feature would guarantee a referral commission to the Content provider, as a Merchant would only allow an access request to the Merchant's website if said access request passes through said Content provider website.

As per claim 2, Messer teaches:

The internet advertising system as defined in claim 1, wherein said advertiser's web server induces each of said user terminals to access through said advertising web server if said advertiser's web server receives an access request directly from said each of said user terminals. The same rejection applied to claim 1 is applied to claim 2.

As per claim 3, Messer teaches:

The internet advertising system as defined in claim 1, wherein said advertiser's web server rejects a direct access request from each of said user terminals. The same rejection applied to claim 1 is applied to claim 3.

As per claim 4, Messer teaches:

The internet advertising system as defined in claim 1, wherein said advertiser's web server allows an access request delivered from each of said user terminals if said access request is attached with an ID code (see column 8, lines 52-67).

As per claim 5, Messer teaches:

The internet advertising system as defined in claim 4, wherein said ID code is unique to said advertising web server (see column 8, lines 52-67).

As per claim 6, Messer teaches:

The internet advertising system as defined in claim 1, wherein said advertiser's web server allows only an access request linked with information provided from said advertising web server to each of said user terminals (see column 7, lines 25-30).
